

AI Copilots Security

Prevent Copilot risks, deploy in minutes

We believe adopting AI will significantly enhance our competitive edge. As a leading global investment firm in a regulated industry, controls are essential.

Apex has helped us implement the building blocks for AI effectively, allowing for its future expansion across our firm."

Adam, CIO, Investment firm

"Apex provides the fastest time to value I've seen in the security domain. With an agentless solution that takes minutes to deploy, you get visibility across your GenAI activity, enforce the company's policies on it, and detect threats instantly."

Brian Lozada, Director of Security, Amazon GME

Copilots are a game changer for your business, but having AI Copilot in your organization is like having an **employee with permission to everything who can decide on anything.**

Enforce your policies, prevent threats

Ensure Copilot generated content is accelerating your business and not **risking it with confidential data exposure or malicious outputs.** Enforce your policies on how outputs should be handled to prevent harm to your operational and business continuity and integrity

Agentless, Cross-Platform solution

The only Agentless solution that supports all IDEs. Instantly integrate Apex across your Copilots, prevent risks before they turn into incidents

Policies	
Rule	Users outside Executive department attempted to access confidential finance reports
Apps	Microsoft 365
Severity	Critical
Actions	Block

How do I containerise my project?

Github Copilot Extension

Opening a Pull Request to add the generated files. This could take a few moments. I have opened a pull request for you.

Unauthorized automatic PR generation by GitHub Copilot Docker extension with suspicious code

Full visibility & Advanced Threat Detection

Have full visibility to Copilot generated content, files accessed and used, conversation topics, maluse of AI, and suspicious behavior. Investigate and hunt threats across your company and platforms, stay safe and be compliant.
